Six-monthly Cumulative Indexes to Science Abstracts

The annual cumulative indexes for the 1966 (volume 69) issues will be published in two parts, each covering a six-month period. The present 1966 Part I indexes should be retained for use with the January–June issues, and the Part II (July–December) indexes wil' be issued after the publication of the December issue. Abstracts will continue to be numbered consecutively throughout the twelve monthly issues of each Section, as in previous years, and these twelve issues will complete a single volume.

AUTHOR INDEX—PART I

For the sake of simplicity and uniformity, all names beginning with articles or prepositions are listed as if written as single words, regardless of nationality (e.g. Van Vleck is listed as if written Vanvleck). Cross-references are included in appropriate places. Compound names are generally listed under the last component, unless hyphenated; exceptions to this rule are appropriately cross-referenced.

All names are reproduced in the abstracts and the index with the same spelling as in the original articles; in the case of articles printed in Cyrillic characters, a letter-by-letter transliteration is given. Russian authors' names may appear in Latin-alphabet publications in various forms, due to the use of different transliteration schemes; these names are reproduced as printed in the articles abstracted.

A shortened form of the title of the article is used instead of the complete title; this shortened form will, in most cases, be sufficient to differentiate a particular article from any other that the author may have written.

When an article has several authors:

i) each author's name appears separately, and all the names do NOT appear together in an entry;
ii) the first author's name is followed by a '+' sign before the abstract number to indicate that there are further authors, whereas for the co-authors, a '+' sign precedes their names, to indicate that they are not the first author.

The Abstract Number given with each entry incorporates the final digit of the year of publication in "Science Abstracts"; thus, "6=1234" in this index means 'Abstract 1234 in the 1966 volume of this Section of "Science Abstracts"'.
